PRODUCT OVERVIEW

**Uses**
Resin binder system for High Friction Surface Treatments and Lane Demarcation

**Features**
- Rapid cure at temperatures below 40°F
- Rapid cure rates allow for faster return to traffic
- Enhanced aggregate retention with technological advancements
- Designed specifically to bond to specified HFST aggregates
- Superior UV stability
- Designed to maintain durability through extreme thermal cycles
- Exceeds the requirements of most HFST specifications
- Simplified stoichiometry reduces concerns with mix ratio
- Can be applied with current automated installation equipment
- Can be mixed by hand for smaller installation
- Excellent adhesion to asphalt and concrete pavements
- Deep penetrating primer system for PCC installations

**Physical Properties**
- 900-1400 cps viscosity resin
- 2500 psi tensile strength
- 5000 psi 24 hour compressive strength
- >30% tensile elongation
